

W+W360°

PROJECT + LIFECYCLE CONTROL

PROJECT · PROCESS · PEOPLE · SCOPE · CHANGE

Lead digitization projects to success with the W+W360° method

Special advantages for S/4 HANA projects. 100% success!

The W+W360° method is a holistic build & lifecycle accelerator to increase the success of digitization projects. Process and change tools are integrated with those of project management and ERP implementation and optimization. Our method systematically collects all project information, documents and versions it, connects it with processes, roles, employees and responsibilities and evaluates it. The W+W360° method is the "Single-Point-of-Truth". It ensures a clean flow of information, an optimal approval process, clear responsibilities and the required transparency for smooth change management in the project phase of the build, and for lifecycle management.

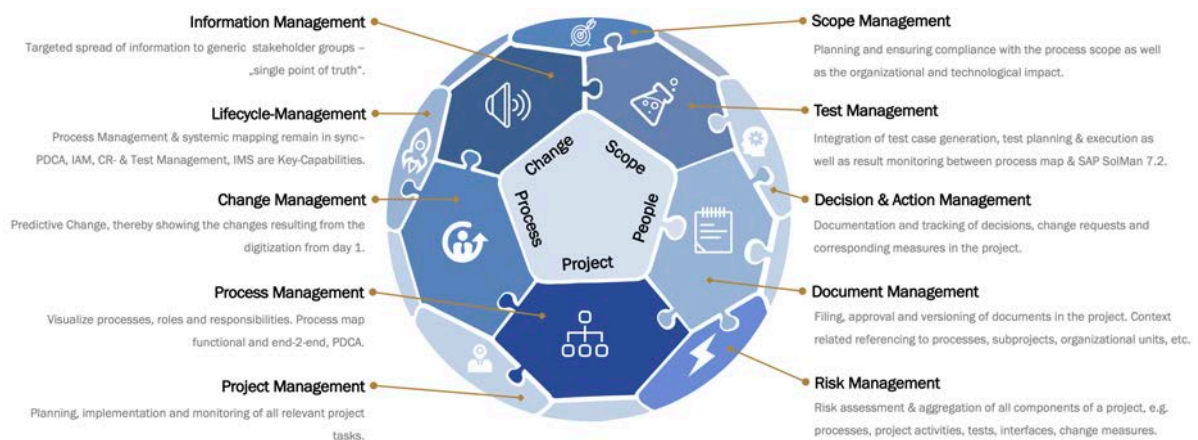

The W+W360° method – “Single-Point-of-Truth” for ERP projects

In the past 25 years, in which the W+W Consulting GmbH has accompanied a large number of projects, one thing has become clear: the management of technology implementation projects wind up with highly complex issues, which require and generate an enormous amount of information and that pose a variety of different challenges to the project team. The use of supporting methods and tools is not only helpful, but almost indispensable. However, there was no existing method that combines all the necessary functions. W+W developed the W+W360° method based on the BPM solution Aeneis for precisely this purpose.

W+W360°

PROJECT + LIFECYCLE CONTROL

The W+W360° method combines and structures all relevant information. The transparency and integrity from every point of view, which is available at all times, creates trust among all stakeholders.

The following advantages, among others result from using the W+W360° method:

- Overview of project budgeting and cost recording of sub-projects
- Traceability of problems and project decisions
- Transparency by linking project managers with processes
- Current expense recording in terms of costs and time
- Integration of process, change, test, risk and lifecycle management
- Integrated monitoring from the perspective of the processes and the project of the progress, risks, costs and change - stakeholders optimized

The W+W360° method was created, based on more than 25 years project management experience to increase the efficiency and quality of build, and lifecycle management. We would be happy to show you, how you can safely maneuver your digitization projects to the safe harbour with this solution. If required, we are content to support you with our skills and experience.

VISION

What drives us?

Our vision is to provide our customers with the most efficient and effective method for IT implementation projects and process-driven life cycle management. We ensure the success of digital transformation projects.

MISSION

How do we do that?

Our mission is to improve our consulting know-how every day and to incorporate this progress into the tool-based method W+W360° and thereby to show our customers a safe way.

Challenge us, we are looking forward to convince you. As part of a web session, you can convince yourself, that we don't promise too much. It only takes a few hours before you can manage your first project using the W+W360° method.

Vision • Value • efficient • effective

Thank you for your interest.
